Current Opinion in CARDIOLOGY

Each issue focuses on one or more major sections of the subject and provides a collection of highly readable, timely reviews of all significant recent developments, written by leading experts. You will be surprised how little time it takes you to stay informed.

Past issues form a unique reference to developments throughout your field. Whatever your subject of interest, you can quickly and efficiently find a description of the relevant developments, backed up by the best bibliographic information available.

Each reviewer provides a list of references and recommended reading identifying and annotating papers "of special interest", or "of outstanding interest". The selected reference list at the end of each review is supplemented by a comprehensive accompanying slide atlas is also available.

NO RISK GUARANTEE:
Your money will be refunded if you cancel within 30 days of receiving your order. You must return all goods received undamaged.

Order form for Current Opinion in CARDIOLOGY Volume 9, 1994, 6 issues
All new manuscripts, together with those that are being refereed or that have been returned to authors for revision, should be sent to:

ECOR
European Heart House
2035 Route des Colles
Les Templiers B.P. 179
06903 Sophia Antipolis Cedex
France
Att. TINA OLDENBURG
Tel: +33 92 94 76 00

Similarly, all queries relating to manuscript progress up to acceptance should be addressed to the office in France. However, ALL PROOFS should continue to be sent to the London office.
Contents continued

Therapy
Eligibility for reperfusion therapy and outcome in elderly patients with acute myocardial infarction
D. HIRMERT, P. G. STEG, J.-M. JULIARD, F. NEUKIRCH, M.-C. AUMONT AND R. GOURGON 483
Long-term outcome of coronary angioplasty in elderly patients with post-infarction angina
A. INIGUEZ, C. MACAYA, R. HERNANDEZ, F. ALFONSO, J. GOICOLEA, J. M. RIBERA AND P. ZARCO 489

Methodology
Exercise peak VO\textsubscript{2} determination in chronic heart failure: is it still of value?
G. ROUL, M.-E. MOULICHON, P. BAREISS, P. GRIES, J. SACREZ, PH. GERMAIN, J.-M. MOSSARD AND A. SACREZ 495

Pathological study
The congenital bicuspid aortic valve with post-inflammatory disease — a neglected pathological diagnosis of clinical relevance
A. S. SADÉE, A. E. BECKER AND J. A. VERHEUL 503

Sports medicine
Arrhythmias and ST segment deviation during prolonged exhaustive exercise (ski marathon) in healthy middle-aged men
O. J. LUURILA, J. KARJALAINEN, M. VIITASALO AND L. TOIVONEN 507

Drug studies
Effect of dofetilide on cardiac repolarization in patients with ventricular tachycardia. A study using simultaneous monophasic action potential recordings from two sites in the right ventricle
S. YUAN, B. WOHLFART, H. S. RASMUSSEN, S. OLSSON AND C. BLOMSTRÖM-LUNDQVIST 514

Haemodynamic effects of enalaprilat and preload in acute severe heart failure complicating myocardial infarction
H. TOHMO, M. KARRANKO AND K. KORPILAHTI 523

Additive haemodynamic effects of piroximone and prostacyclin in severe chronic heart failure

Experimental studies
Direct in vivo visualization of right cardiac anatomy by fibreoptic endoscopy: observation of radiofrequency-induced acute lesions around the ostium of the coronary sinus
O. FUJIMURA, M. A. LAWTON AND C. A. KOCH 534
Low molecular weight heparin (Fragmin®) prevents early reocclusion following femoral artery thrombolysis with rt-PA in rabbits
R. KORNOWSKI, M. GLIKSON, D. HASDAI, A. CHERNINE, D. OHAD AND A. BATTLER 541
Dispersion and delay of electrical restitution in the globally ischaemic heart
R. W. KURZ, X. L. REN AND M. R. FRANZ 547

Basic cardiology
Myocardial contractility evaluated from cross-oriented segments during β-adrenergic blockade or sympathetic nerve stimulation
S. BIRKELAND AND E. HEXEBERG 555
Metabolic effects of propionate, hexanoate and propionylcarnitine in normoxia, ischaemia and reperfusion. Does an anaplerotic substrate protect the ischaemic myocardium?
K. E. SUNDQVIST, K. H. VUORINEN, K. J. PEUHKURINEN AND I. E. HASSINEN 561

Case studies
Bicoronal – pulmonary fistulae with coexistent mitral valve prolapse: a case report and literature review of coronary – pulmonary fistula
S. S. ASHRAF, N. SHAUKAT, M. FISHER, B. CLARKE AND D. J. KEENAN 571
Sustained reversal of right-to-left atrial septal defect flow after pulmonic valvuloplasty in an adult
J. E. CARTER, JR., T. FELDMAN AND J. D. CARROLL 575
Acute myocardial infarction due to thrombus formation in congenital coronary artery fistula
K. SHIRAI, M. OGAWA, H. KAWAGUCHI, T. KAWANO, Y. NAKASHIMA AND K. ARAKAWA 577

**Congestive Heart Failure**
*Pathophysiology, Diagnosis and Comprehensive Approach to Management*

1993. XIII, 769 pp. 327 figs. Hardcover
DM 248,- ISBN 3-540-94017-0

This book is the first to approach the field of congestive heart failure as a true subspecialty of cardiology and cardiovascular surgery. The text discusses the entire field of congestive heart failure: the basic pathophysiologic mechanisms; the underlying diseases; the effects of heart failure on the remainder of circulation; the mechanisms and results of pharmacologic therapy; the multiple surgical and multidisciplinary approaches to end-stage heart disease; and the ultimate prognosis of congestive heart failure in all of the areas of heart failure management. Thus, this text uniquely puts into perspective all of the features of congestive heart failure and its management for the cardiologist, cardiovascular surgeon, and general internist.
YOU'RE LOOKING AT STRESS TESTING FROM A NEW ANGLE.

AND SO ARE WE.

In today's hectic medical environment, the demands on you and your practice are constantly changing.

Quinton understands that the next stress test system you choose must help you keep pace with those changes. That's why we developed the Q4500 — the most versatile stress test system ever designed.

So find out about the stress test system that's part of the solution, not the problem.

(Available in Français, Deutsch, Italiano and Español versions.)
Cardiology imaging standards have just been raised.

To meet the demanding needs of your cardiovascular department or operating room, Aloka has designed the SSD-875. By incorporating multifrequency probe technology and full-range dynamic focusing, high-resolution images are standard. Also standard are the Pulsed Wave (PW) Doppler, the HPRF-PW Doppler, the Steerable CW (STCW) Doppler and the Color Doppler.

The SSD-875 is equipped with the multifunctional cine memory allowing real-time or slow-motion playback while the split-screen function lets you replay two different images simultaneously for comparison and analysis.

Thanks to a wide range of transthoracic and transesophageal probes, comprehensive diagnoses can be offered to adults, as well as for pediatric and neonatal cardiac applications. And the newly developed Matrix Phased-Array Bi-Plane Transesophageal Transducer provides a more true-to-life image through the use of a bi-plane real-time display. Plus, the highly useful Stress Echo unit is available as an option.

In addition, the user-preset function allows you to create a customized program for each application. Rounding out a list of features that help you give the very best of medical care.
Reflecting Quality Worldwide

Relied upon by leading surgeons, Swann-Morton blades are as worldwide as their reputation for quality.

Alongside their classic surgical range, there are the “Major” orthopaedic blades, “Minor” disposables, and special blades for cervical biopsy and myringotomy. Most recent is the completely new “Fine” range.

Extensively researched, all blades are produced under strict quality control by precise automation, and inspected at every stage.

Swann-Morton always have the blade for the task, uniformly correct in shape, size and weight, and durably sharp — that’s why they are famous worldwide!

Kabikinase - established efficacy and cost effectiveness

KABIKINASE® 1.5 Million IU
Abbreviated Prescribing Information

Presentation: Vials containing a straw coloured lyophilised powder. Each vial contains streptokinase 1.5 million IU. Human albumin and buffering agents are present as stabilisers.

Action: Streptokinase induces dissolution of intravascular thrombi and emboli.

Indication: Acute Myocardial infarction.

Contraindications: Kabikinase should not be administered intramuscularly.

Dosing and administration: Recommended for adults. Streptokinase 1.5 million IU in physiological saline is diluted in a maximum of 10 ml of saline, and then administered by the antecubital route. Care should be taken to avoid the formation of foam. The concentration should be maintained as close as possible to 10,000 IU/ml, and the saline should be taken to avoid the formation of foam. The concentration is maintained within 10,000 IU/ml during the period of streptokinase infusion.

Preparation of solution: Streptokinase is not recommended for intravenous injection. Fresh frozen plasma, preferably intravenously, should be administered to correct haemostatic deficiencies. It is recommended that the complete data sheet is consulted prior to anticipated usage.

Pregnancy: Kabikinase is contraindicated during pregnancy, since there may be an increased risk of placental separation.

Product License Number: Kabikinase® 1.5 Million IU 00220070.

Product Authorisation Number: Kabikinase® 1.5 Million IU 18/97/135.

Kabikinase® 1.5 Million IU

Pharmacovigilance: Pharmacovigilance procedures are in place. Patients are encouraged to report any adverse effects to the Manufacturer.

RECOMMENDED THAT THE COMPLETE DATA SHEET IS CONSULTED PRIOR TO ANTICIPATED USAGE.
